Case Workbook in Human Genetics, Second Edition

Written by Ricki Lewis, the case study approach encourages students to analyze problems in the same way geneticists do. Many new cases support fundamental concepts with real situations adapted from recent journals. An answer manual is available for the instructor.

Instructor's Manual and Test Item File

Revised by Jack Fabian, the Instructor's Manual features a chapter overview, a teaching outline, ideas for classroom discussion, internet resources and activities, correlation notes for multimedia supplements, answers to end-of-chapter questions, additional questions with answers, and multiple choice questions for testing.

Multimedia Support

- **Genetics: From Genes to Genomes CD ROM** reinforces fundamental concepts with animations and interactive exercises. Icons in the text indicate related topics on the CD.
- **Lewis Human Genetics website** provides additional resources for both student and instructor. Instructor may also link to the website for McGraw-Hill's *PageOut: The Course Website Development Center*.
- **Computerized Test Item File** compatible with either Windows or Macintosh.
- **Transparency Acetates** of key illustrations from the text.
