
CONTENTS

Preface	xi
About the Authors	xiv

PART I Problem Formulation

1 The Nature and Organization of Optimization Problems	3
1.1 What Optimization Is All About	4
1.2 Why Optimize?	4
1.3 Scope and Hierarchy of Optimization	5
1.4 Examples of Applications of Optimization	8
1.5 The Essential Features of Optimization Problems	14
1.6 General Procedure for Solving Optimization Problems	18
1.7 Obstacles to Optimization	26
References	27
Supplementary References	27
Problems	28
2 Developing Models for Optimization	37
2.1 Classification of Models	41
2.2 How to Build a Model	46
2.3 Selecting Functions to Fit Empirical Data	48
2.3.1 <i>How to Determine the Form of a Model</i> / 2.3.2 <i>Fitting Models by Least Squares</i>	
2.4 Factorial Experimental Designs	62
2.5 Degrees of Freedom	66
2.6 Examples of Inequality and Equality Constraints in Models	69
References	73
Supplementary References	73
Problems	74

3	Formulation of the Objective Function	83
3.1	Economic Objective Functions	84
3.2	The Time Value of Money in Objective Functions	91
3.3	Measures of Profitability	100
	References	104
	Supplementary References	104
	Problems	105

Part II Optimization Theory and Methods

4	Basic Concepts of Optimization	113
4.1	Continuity of Functions	114
4.2	NLP Problem Statement	118
4.3	Convexity and Its Applications	121
4.4	Interpretation of the Objective Function in Terms of its Quadratic Approximation	131
4.5	Necessary and Sufficient Conditions for an Extremum of an Unconstrained Function	135
	References	142
	Supplementary References	142
	Problems	142
5	Optimization of Unconstrained Functions: One-Dimensional Search	152
5.1	Numerical Methods for Optimizing a Function of One Variable	155
5.2	Scanning and Bracketing Procedures	156
5.3	Newton and Quasi-Newton Methods of Unidimensional Search	157
	<i>5.3.1 Newton's Method / 5.3.2 Finite Difference Approximations to Derivatives / 5.3.3 Quasi-Newton Method</i>	
5.4	Polynomial Approximation Methods	166
	<i>5.4.1 Quadratic Interpolation / 5.4.2 Cubic Interpolation</i>	
5.5	How One-Dimensional Search Is Applied in a Multidimensional Problem	173
5.6	Evaluation of Unidimensional Search Methods	176
	References	176
	Supplementary References	177
	Problems	177
6	Unconstrained Multivariable Optimization	181
6.1	Methods Using Function Values Only	183
	<i>6.1.1 Random Search / 6.1.2 Grid Search / 6.1.3 Univariate Search / 6.1.4 Simplex Search Method / 6.1.5 Conjugate Search Directions / 6.1.6 Summary</i>	
6.2	Methods That Use First Derivatives	189
	<i>6.2.1 Steepest Descent / 6.2.2 Conjugate Gradient Methods</i>	

6.3	Newton’s Method	197
	6.3.1 Forcing the Hessian Matrix to Be Positive-Definite /	
	6.3.2 Movement in the Search Direction / 6.3.3 Termination /	
	6.3.4 Safeguarded Newton’s Method / 6.3.5 Computation of	
	Derivatives	
6.4	Quasi-Newton Methods	208
	References	210
	Supplementary References	211
	Problems	211
7	Linear Programming (LP) and Applications	222
7.1	Geometry of Linear Programs	223
7.2	Basic Linear Programming Definitions and Results	227
7.3	Simplex Algorithm	233
7.4	Barrier Methods	242
7.5	Sensitivity Analysis	242
7.6	Linear Mixed Integer Programs	243
7.7	LP Software	243
7.8	A Transportation Problem Using the EXCEL Solver	
	Spreadsheet Formulation	245
7.9	Network Flow and Assignment Problems	252
	References	253
	Supplementary References	253
	Problems	254
8	Nonlinear Programming with Constraints	264
8.1	Direct Substitution	265
8.2	First-Order Necessary Conditions for a Local Extremum	267
	8.2.1 Problems Containing Only Equality Constraints /	
	8.2.2 Problems Containing Only Inequality Constraints /	
	8.2.3 Problems Containing both Equality and Inequality	
	Constraints	
8.3	Quadratic Programming	284
8.4	Penalty, Barrier, and Augmented Lagrangian Methods	285
8.5	Successive Linear Programming	293
	8.5.1 Penalty Successive Linear Programming	
8.6	Successive Quadratic Programming	302
8.7	The Generalized Reduced Gradient Method	306
8.8	Relative Advantages and Disadvantages of NLP Methods	318
8.9	Available NLP Software	319
	8.9.1 Optimizers for Stand-Alone Operation or Embedded	
	Applications / 8.9.2 Spreadsheet Optimizers / 8.9.3 Algebraic	
	Modeling Systems	
8.10	Using NLP Software	323
	8.10.1 Evaluation of Derivatives: Issues and Problems /	
	8.10.2 What to Do When an NLP Algorithm Is Not “Working”	

References	328
Supplementary References	329
Problems	329
9 Mixed-Integer Programming	351
9.1 Problem Formulation	352
9.2 Branch-and-Bound Methods Using LP Relaxations	354
9.3 Solving MINLP Problems Using Branch-and-Bound Methods	361
9.4 Solving MINLPs Using Outer Approximation	369
9.5 Other Decomposition Approaches for MINLP	370
9.6 Disjunctive Programming	371
References	372
Supplementary References	373
Problems	374
10 Global Optimization for Problems with Continuous and Discrete Variables	381
10.1 Methods for Global Optimization	382
10.2 Smoothing Optimization Problems	384
10.3 Branch-and-Bound Methods	385
10.4 Multistart Methods	388
10.5 Heuristic Search Methods	389
<i>10.5.1 Heuristic Search / 10.5.2 Tabu Search / 10.5.3 Simulated Annealing / 10.5.4 Genetic and Evolutionary Algorithms / 10.5.5 Using the Evolutionary Algorithm in the Premium Excel Solver / 10.5.6 Scatter Search</i>	
10.6 Other Software for Global Optimization	411
References	412
Supplementary References	413
 Part III Applications of Optimization <hr/>	
11 Heat Transfer and Energy Conservation	417
Example 11.1 Optimizing Recovery of Waste Heat	419
Example 11.2 Optimal Shell-and-Tube Heat Exchanger Design	422
Example 11.3 Optimization of a Multi-Effect Evaporator	430
Example 11.4 Boiler/Turbo-Generator System Optimization	435
References	438
Supplementary References	439
12 Separation Processes	441
Example 12.1 Optimal Design and Operation of a Conventional Staged-Distillation Column	443

Example 12.2	Optimization of Flow Rates in a Liquid–Liquid Extraction Column	448
Example 12.3	Fitting Vapor–Liquid Equilibrium Data Via Nonlinear Regression	451
Example 12.4	Determination of the Optimal Reflux Ratio for a Staged-Distillation Column	453
	References	458
	Supplementary References	458
13	Fluid Flow Systems	460
Example 13.1	Optimal Pipe Diameter	461
Example 13.2	Minimum Work of Compression	464
Example 13.3	Economic Operation of a Fixed-Bed Filter	466
Example 13.4	Optimal Design of a Gas Transmission Network	469
	References	478
	Supplementary References	478
14	Chemical Reactor Design and Operation	480
Example 14.1	Optimization of a Thermal Cracker Via Linear Programming	484
Example 14.2	Optimal Design of an Ammonia Reactor	488
Example 14.3	Solution of an Alkylation Process by Sequential Quadratic Programming	492
Example 14.4	Predicting Protein Folding	495
Example 14.5	Optimization of Low-Pressure Chemical Vapor Deposition Reactor for the Deposition of Thin Films	500
Example 14.6	Reaction Synthesis Via MINLP	508
	References	513
	Supplementary References	514
15	Optimization in Large-Scale Plant Design and Operations	515
15.1	Process Simulators and Optimization Codes	518
15.2	Optimization Using Equation-Based Process Simulators	525
15.3	Optimization Using Modular-Based Simulators	537
	<i>15.3.1 Sequential Modular Methods / 15.3.2 Simultaneous Modular Methods / 15.3.3 Calculation of Derivatives</i>	
15.4	Summary	546
	References	546
	Supplementary References	548
16	Integrated Planning, Scheduling, and Control in the Process Industries	549
16.1	Plant Optimization Hierarchy	550
16.2	Planning and Scheduling	553
	<i>16.2.1 Planning / 16.2.2 Scheduling</i>	

16.3	Plantwide Management and Optimization	565
16.4	Unit Management and Control	567
	<i>16.4.1 Formulating the MPC Optimization Problem</i>	
16.5	Process Monitoring and Analysis	575
	References	579
	Supplementary References	581
Appendixes		583
A	Mathematical Summary	583
	<i>A.1 Definitions / A.2 Basic Matrix Operations / A.3 Linear Independence and Row Operations / A.4 Solution of Linear Equations / A.5 Eigenvalues, Eigenvectors / References / Supplementary References / Problems</i>	
B	Cost Estimation	603
	<i>B.1 Capital Costs / B.2 Operating Costs / B.3 Taking Account of Inflation / B.4 Predicting Revenues in an Economic-Based Objective Function / B.5 Project Evaluation / References</i>	
	Nomenclature	631
	Name Index	637
	Subject Index	643
