

CONTENTS

Preface	vii	References	61
		Problems	61
		Exercises	61
		Computer Exercise	61
1 Introduction	1	4 Geometric Design	63
1.1 Transportation Engineering	1	4.1 Geometric Cross Section	63
1.2 The Transportation System	2	4.2 Vertical Alignment	66
1.3 Modes of Transportation	6	4.3 Horizontal Alignment	76
1.4 Institutional Structure	17	4.4 Superelevation	83
1.5 Civil Engineering Involvement in Transportation	19	4.5 Coordination of Horizontal and Vertical Alignment	92
1.6 Careers in Transportation Engineering	20	4.6 Intersections and Interchanges	94
1.7 Summary	21	4.7 Design Software	95
References	22	4.8 Summary	100
Exercises	22	References	101
		Problems	101
		Computer Exercises	105
		Design Exercises	106
2 Transportation System Issues and Challenges	25	5 Earthwork	111
2.1 Traffic Congestion	25	5.1 Earthwork Cross Sections	111
2.2 Traffic Safety	27	5.2 Earthwork Volumes	115
2.3 Equality of Access	30	5.3 Mass Diagrams	118
2.4 Environmental Protection	32	5.4 Summary	123
2.5 New Technology	34	Reference	124
2.6 Funding	38	Problems	124
2.7 Institutional Arrangements	42	Computer Exercises	130
2.8 Summary	44	Design Exercise	130
References	44	6 Surfaces and Guideways	133
Exercise	45	6.1 Highway Pavements	133
		6.2 Railroad Track	154
		6.3 Summary	164
3 Introduction to Physical Design of Transportation Facilities	47		
3.1 The Design Process	47		
3.2 Design Standards	50		
3.3 Design Speed and Sight Distance	52		
3.4 Design Documents	57		
3.5 Summary	60		

Reference	164	10.2 Rail Capacity	255
Problems	164	10.3 Highway Capacity	258
Exercises	166	10.4 Summary	282
		References	282
		Problems	283
		Computer Exercise	288
		Design Exercise	289
7 Mitigation of Environmental Impacts	169	11 Traffic Control	291
7.1 Noise	169	11.1 Traffic Signals	292
7.2 Encroachment on Natural Habitats	175	11.2 Signal Timing	299
7.3 Stormwater Management	179	11.3 Signal Coordination	308
7.4 Hazardous Wastes and Soil Contamination	182	11.4 Freeway Management Systems	313
7.5 Summary	184	11.5 Rail Traffic Control	320
Reference	184	11.6 Air Traffic Control	321
Problems	185	11.7 Summary	325
Exercises	185	References	325
		Problems	326
		Exercises	329
		Design Exercises	330
8 Traffic-Analysis Techniques	187	12 Transit Operations	333
8.1 Space–Time Relationships	187	12.1 Route Planning	333
8.2 Queuing Analysis	199	12.2 Route Location	334
8.3 Network Analysis	210	12.3 Stop Location	336
8.4 Summary	216	12.4 Route Schedules	339
References	217	12.5 Vehicle and Labor Scheduling	344
Problems	217	12.6 Control of Operations	346
Computer Exercises	222	12.7 Route Evaluation	347
		12.8 Summary	348
		References	349
		Problems	349
		Exercises	351
		Computer Exercise	351
		Design Exercise	352
9 Traffic Flow	223	13 Transportation Demand Analysis	355
9.1 Traffic Data	223	13.1 Travel Behavior	355
9.2 Traffic Flow Models	224		
9.3 Traffic Data Analysis	236		
9.4 Summary	245		
References	246		
Problems	246		
Computer Exercises	250		
10 Capacity and Level of Service	251		
10.1 Air Traffic Capacity	252		

13.2	Travel Demand Modeling	356	15	Transportation Project Evaluation	407
13.3	Trip Generation Models	360	15.1	Economic Evaluation Techniques	408
13.4	Trip Distribution Models	363	15.2	Environmental Impact Assessment	417
13.5	Mode Choice Models	366	15.3	Summary	429
13.6	Trip Assignment Models	368		References	430
13.7	Sequential Modeling Process: An Example	369		Problems	431
13.8	Summary	378		Exercises	433
	References	378		Computer Exercises	433
	Problems	378		Appendix A:	
	Computer Exercises	382		Statistical Tables	435
14	Transportation Planning	385		Appendix B:	
14.1	Perspectives on the Planning Process	386		Tables and Charts for Pavement Design	438
14.2	Planning Regulations	390		Appendix C:	
14.3	Transportation and Air Quality Planning	393		Highway Capacity Manual Materials (Metric)	455
14.4	Planning Studies	397		Appendix D:	
14.5	Planning Study Organization	402		Highway Capacity Manual Materials (Traditional)	469
14.6	Summary	404		Index	485
	References	404			
	Exercises	405
