

# 3.11

## Decimal Division: Writing Zero in the Dividend

### • Example 1

$$(a) \quad 3.245 \overline{)34.5} \longrightarrow 3.245 \overline{)34.500}$$

Multiply both numbers by 1000. That is, shift the decimal points three places to the right. As you can see, you may have to add zeros in the dividend.

$$(b) \quad 0.34 \overline{)58} \longrightarrow 0.34 \overline{)58.00}$$

Multiply both numbers by 100.

### ● ● ● CHECK YOURSELF 1

Rewrite the division problems so that the divisors are whole numbers.

a.  $3.7 \overline{)5.93}$

b.  $2.58 \overline{)125.7}$

### ● ● ● CHECK YOURSELF ANSWER

1. (a)  $37 \overline{)593}$ ; (b)  $258 \overline{)12570}$
