Word Problem with Powers of Ten

• Example 1

How many meters are in 2.45 kilometers?

Solution

$$2.45 \times 1000 = 2450. = 2450$$

To multiply a decimal number by 1000, move the decimal point 3 places to the right. This involves adding a zero.

There are 2450 meters in 2.45 kilometers.

If the result is a whole number, there is no need to write the decimal point.

● ● ● CHECK YOURSELF 1

$$5.23 \times 1000$$

• Example 2

How many meters does 3450 millimeters make?

Solution

$$\frac{3450}{1000} = 3.45$$

To divide a number by 1000, move the decimal point three places to the left. In the example, the decimal point is implicit, to the right of the zero: $3450 = 3450.$ Moving the decimal point three places and dropping the zero gives 3.45.

3450 millimeters makes 3.45 meters.
